Bangle in titanium, blue anodised, with 56 diamonds

Sold

This bangle is an individual bespoke commission that unites technical refinement with expressive design.

The blue anodised titanium delights with its intense colour and striking hammered texture. The sparkling diamonds add a fine accent.

The blue colour is created by an electrochemical process:

Electric current in a special bath produces an extremely thin oxide layer on the titanium surface, which reflects the light in a particular way and so brings out the characteristic shade of blue.
